**CLAIMS APPENDIX**

1. A data-processing system, comprising:  
a microprocessor [PRC];  
a communication device [COM] communicating with an electronic module [MOD] intended to send a convention signal to said microprocessor; and  
a hardware circuit [HARD] allowing an inversion of an order of bits of a word as a function of a value of the convention signal during a transfer of the word between said electronic module [MOD] and said microprocessor [PRC].
2. The data-processing system as claimed in claim 1, wherein said electronic module [MOD] is a Subscriber Identity Module card.
3. The data-processing system as claimed in claim 1, wherein said hardware circuit [HARD] allows inversion of the value of the bits of the word as a function of the value of the convention signal.
4. The data-processing system as claimed in claim 1, wherein said hardware circuit [HARD] includes:  
a switch [SWHMP, SWHPM];  
a right shift register [RXMP, RYPM] electrically connected to said switch; and  
a left shift register [RYMP, RXPM] electrically connected to said switch.

5. A terminal, comprising:
- a microprocessor [PRC];
  - a communication device [COM] communicating with an electronic module [MOD] intended to send a convention signal to said microprocessor; and
  - a hardware circuit [HARD] allowing an inversion of an order of bits of a word as a function of a value of the convention signal during a transfer of the word between said electronic module [MOD] and said microprocessor [PRC].
6. The terminal as claimed in claim 5, wherein said electronic module [MOD] is a Subscriber Identity Module card.
7. The terminal as claimed in claim 5, wherein said hardware circuit [HARD] allows inversion of the value of the bits of the word as a function of the value of the convention signal.
8. The terminals as claimed in claim 5, wherein said hardware circuit [HARD] includes:
- a switch [SWHMP, SWHPM];
  - a right shift register [RXMP, RYPM] electrically connected to said switch; and
  - a left shift register [RYMP, RXPM] electrically connected to said switch.

9. A data-processing system, comprising:

a hardware circuit [HARD];

a communication device [COM] for communicating a contention signal and a word to said hardware circuit [HARD] from one of a microprocessor [PRC] and an electronic module [MOD]; and

wherein said hardware circuit includes means for implementing one of a direct convention and an indirect convention of an order of bits of the word as a function of a value of the contention signal.
